differential equations dynamical systems and linear

May 27th, 2020 - this book is about dynamical aspects of ordinary differential equations and the relations between dynamical systems and certain fields outside pure mathematics a prominent role is played by the structure theory of linear operators on finite dimensional vector spaces the authors have included a self contained treatment of that subject'

'**dynamical system**

May 6th, 2020 - linear dynamical systems can be solved in terms of simple functions and the behavior of all orbits classified in a linear system the phase space is the n dimensional euclidean space so any point in phase space can be represented by a vector with n numbers the analysis of linear systems is possible because they satisfy a superposition principle if $u(t)$ and $w(t)$ satisfy the differential'
