Proceedings

October 5th, 2019 - If we fall back on our guiding principle that the gravitational field is determined by its singular points poles of various kinds which stand for the Newtonian attracting matter it might be held to mean that where that field is free of singularities the electrodynamic field will be free of singularities also for the four electric field equations are involved in the ten gravitational ones'

'G functions and multisum versus holonomic sequences

April 30th, 2020 - The purpose of the paper is three fold a we prove that every sequence which is a multidimensional sum of a balanced hypergeometric term has an asymptotic expansion of Gevrey type 1 with rational exponents b we construct a class of G functions that e from enumerative binatorics and c we give a

counterexample to a question of Zeilberger that asks whether holonomic sequences can be'

'An algorithm puting non solvable spectral radii of p

**March 28th, 2020 - One has $R_1 R_2 \cdots R_r$ We say that R_i is solvable if $R_i r ? c \ddot{I}$
In this paper we provide an algorithm puting non solvable radii parison of Newton polygons and putation of small radii Let r_1 be an integer A slope sequence is the data of r real numbers $s_1 \cdots s_r$ in increasing order'**
