and games beijing national defense industry press'

**'pareto optimal solutions for stochastic dynamic
June 1st, 2020 - a heuristic algorithm is proposed for a
class of stochastic discrete time continuous variable
dynamic programming problems submitted to non gaussian
disturbances instead of using the expected values of the
objective function the randomness nature of the decision
variables is kept along the process while pareto fronts
weighted by all quantiles of the objective function are
determined'a mathematical programming model to
determine objective**

**May 23rd, 2020 - technique for order performance by
similarity to ideal solution topsis method has been
extended in previous literature to consider the situation
with interval input data however the weights associated
with criteria are still subjectively assigned by decision
makers this paper develops a mathematical programming
model to determine objective weights for the
implementation of interval'**
